Summary

Full Stack Developer passionate about crafting seamless experiences from database to browser. With 1.5 years of experience shipping enterprise applications using Django, React, Next.js, and Laravel, I bring equal depth across backend API design and frontend UI engineering. I love building dynamic, schema-driven interfaces, and real time collaborative tools and I am looking to join a team where I can own features end-to-end and deliver polished, user-centric software.

Technical Skills

Languages: Python, PHP, SQL, TypeScript (and JavaScript), HTML, CSS

Frameworks: FastAPI, Next.js, Django, React, Laravel

Database: PostgreSQL, MySQL, Redis

APIs: REST, WebSockets, OAuth2/JWT

DevOps: Docker, Nginx, GitHub Actions

Experience

Software Development Engineer, Rudra Coresoft – Bangalore

March, 2025 - August, 2026

- **Backend-focused** full-stack engineer delivering production systems across industrial logistics domains using Python/Django, FastAPI, and PHP/Laravel.
- **Designed** REST APIs, OAuth2 authentication, and event-driven async pipelines
- **Built** responsive UI flows and integrated frontends with backend services across the SDLC.
- **Owned** the end-to-end integration between two enterprise systems (Django and Laravel/PHP)
- **Enabled** real-time, secure data exchange across the logistics workflow.

Projects

Arcee - Multi-Tenant No-Code Platform

- **Built** React Admin Studio with dynamic table builder, PostgreSQL naming validation, and Field UI Rules configurator supporting conditional visibility and role-based field control
- **Developed** React Client App that dynamically renders CRUD interfaces from backend schema metadata.
- **Engineered** React Query data layer across both apps for server state caching, automatic invalidation, and paginated queries with centralized OAuth2 + Session hybrid auth.
- **Developed** REST APIs on the Django backend with dynamic schema management and Row-Level Security

Securepass - Enterprise Gate Pass Management

- **Developed** admin dashboards with complex annotated queriesets (Subquery, Exists, Case-When) and real-time status indicators.
- **Built** RESTful APIs for mobile client consumption supporting multi-format parsing (JSON, multipart), nested serializer creation, and file uploads.
- **Implemented** race-condition-safe visit tracking with atomic transactions, ensuring 100% sequential ID integrity across concurrent check-in/check-out operations.
- **Engineered** Firebase Cloud Messaging integration for real-time push notifications to security staff on gate pass events.

Digital Warehouse - Enterprise Warehouse Management

- **Built** real-time WebSocket chat using Laravel Reverb for inter-departmental communication.
- **Engineered** async data export pipelines (CSV/Excel) with Redis queues and frontend progress tracking.

Education

Bangalore Univerity - BCA in Computer Science

2020-2023
