Summary

Backend-focused Full Stack Developer with 2+ years of experience building enterprise applications using Python, Django, FastAPI, React, Next.js, and Laravel. Experienced in REST API design, OAuth2/JWT authentication, PostgreSQL, Redis, WebSockets, asynchronous pipelines, and schema-driven interfaces. Built and integrated backend services with responsive frontend applications, with experience owning features and integrations end-to-end.

Technical Skills

Languages: Python, PHP, SQL, TypeScript (and JavaScript), HTML, CSS

Frameworks: FastAPI, Django, React, Next.js, Laravel, React Query

Database: PostgreSQL, MySQL, Redis

APIs: REST, WebSockets, OAuth2/JWT

DevOps: Docker, Nginx, GitHub Actions

Experience

Software Development Engineer, Rudra Coresoft – Bangalore

July, 2024 - August, 2026

- **Built** production enterprise applications as a backend-focused full-stack engineer using Python/Django, FastAPI, and PHP/Laravel, delivering logistics workflows across the SDLC.
- **Designed** REST APIs, OAuth2 authentication, and event-driven async pipelines, enabling secure and asynchronous application workflows.
- **Built** responsive UI flows and integrated frontend applications with backend services, connecting user-facing features to production APIs.
- **Owned** end-to-end integration between Django and Laravel/PHP enterprise systems, enabling data exchange across two application stacks.
- **Enabled** real-time secure data exchange across logistics workflows through integrated backend services and application communication.

Projects

Arcee - Multi-Tenant No-Code Platform

- **Built** a React Admin Studio with a dynamic table builder, PostgreSQL naming validation, and Field UI Rules configurator, enabling schema-driven field visibility and role-based field control.
- **Developed** a React Client App that dynamically renders CRUD interfaces from backend schema metadata, enabling reusable schema-driven application interfaces.
- **Engineered** a React Query data layer across both applications with server-state caching, automatic invalidation, and paginated queries, supporting centralized OAuth2 and session-based authentication.
- **Developed** Django REST APIs with dynamic schema management and Row-Level Security, enabling multi-tenant data access controls.

Securepass - Enterprise Gate Pass Management

- **Developed** admin dashboards using annotated queriesets with Subquery, Exists, and Case-When, providing real-time status indicators for gate pass workflows.
- **Built** RESTful APIs for mobile clients using JSON and multipart parsing, nested serializer creation, and file uploads, supporting mobile gate pass operations.
- **Implemented** race-condition-safe visit tracking with atomic transactions, ensuring sequential ID integrity across concurrent check-in and check-out operations.
- **Engineered** Firebase Cloud Messaging integration for real-time push notifications, notifying security staff of gate pass events.

Digital Warehouse - Enterprise Warehouse Management

- **Built** real-time WebSocket chat using Laravel Reverb, enabling inter-departmental communication within the warehouse workflow.
- **Engineered** asynchronous CSV/Excel export pipelines using Redis queues and frontend progress tracking, enabling users to track export processing.

Education

Bangalore Univerity - BCA in Computer Science

2020-2023
